

Application Development

Upcoming Systems on 2026

- Administrative ERP
- Centralized BI & Data Analytics System with AI Module Training

Administrative ERP

Administrative ERP (ExNet)

Administration & Company Management

DMS, Policies & Procedures, Announcements

Human Resources (HRM)

Employee Data, Leave & Shift Scheduling, Payroll, Recruitment, Training, Self-service

Finance & Accounting

Chart of Accounts, General Ledger, Expense Management, Budgeting, Financial Reporting

Procurement & Inventory Management

Purchase Requisitions & Approvals, Goods Receipt, Inventory & Asset Tracking, Material Issuance & Returns

Cont...

Management Dashboard & Reporting

Executive KPIs & Analytics, Department Reports, Cost Center Reports, Real-time Charts, Custom Reports

Project & Task Management

Project Planning & Milestones, Task Assignment & Progress, Resource Allocation, Timesheets, File Sharing, Mobile Updates

Document & Record Management

Central Repository, Version Control, Approval Workflows, Policy & Contract Archiving

Cont...

IT & Support Services

IT Asset & License Management, Helpdesk/Tickets, Maintenance Tracking, Mobile Ticket Submission

Meeting & Event Management

Meeting Scheduling, Agenda & Minutes, Event Planning, Meeting Room Booking, Mobile Notifications

Communication & Collaboration

Internal Messaging, Discussion Forums, Email Reminders, Shared Calendar, Mobile Chat & Notifications

External Integrations

Accounting tools, HR tools, and email and SMS gateways are interconnected on a single platform using a micro services architecture, with API-based integration enabling seamless data exchange and centralized management across all modules.

AI-Enhanced BI for Staff Monitoring & Decision Support

Purpose

Enable management to monitor staff performance, guide decisions, and improve workflow accuracy using the BI system.

- Single source of truth for management data
- Read-only ERP integration with automated ETL
- Central data warehouse for analytics
- Executive and departmental dashboards
- KPI tracking with drill-down reports
- Secure, role-based access

Functionality

Behavior Monitoring

- Track staff interactions within ERP and BI systems.
- Record workflow actions, approvals, and task completion.

AI Decision Suggestions

- Analyze historical and current staff actions.
Recommend optimal next steps or corrective actions for staff.

Management Oversight

- Higher management can review AI-suggested actions vs. staff execution.
Evaluate performance accuracy and adherence to processes.

Benefits

- Data-driven decision-making for staff tasks.
Identify training or process gaps.
Increase operational efficiency and accountability.

[illegible][illegible]

Advantages of ERP System

- Centralized data across all departments
- Standardized workflows and processes
- Reduced manual work and duplication
- Real-time visibility and reporting
- Improved data accuracy and consistency
- Better access control and audit trails
- Faster approvals and coordination
- Minimized dependency on individual staff members

Advantages of BI Modules Trained by AI

- **Smarter Task Execution** – AI guides staff actions to ensure work is done correctly and efficiently.
- **Clear Visibility of Performance** – Management can track staff actions against AI recommendations.
- **Focused Skill Development** – Identify where staff need training or process support.
- **Streamlined Operations** – Reduce bottlenecks and unnecessary manual effort.
- **Insight-Driven Management** – Base decisions and evaluations on real data rather than assumptions.
